

Company Profile

Who We Are

With specialty within Japan and Asia, GMO Research & AI is a global company that uncovers value through insights within the global market researching and marketing space, leveraging its technological capabilities and one of the largest online survey panel networks in the industry worldwide.

Philosophy

Engaging People Around the World

As the revolution in digital information continues, the relationship between companies and consumers around the world is also in a process of change. As characterized by the expression “co-creating value,” there is an increasing need for innovative marketing solution platforms that express the concept of reinvigorating and strengthening the relationship between companies and consumers. With a future-focused perspective, GMO Research & AI’s Asia Cloud Panel, which we are developing as the No.1 audience engagement platform in the world, has been operated across all parts of Asia by a variety of consumers and companies, and our aim is to develop additional products & services that fulfill the needs of consumers around the world.

Our Business Model

A One-Stop Platform Connecting Brands with Consumers

Audience Engagement Platform

We distribute online survey projects commissioned by our clients to our global network of consumer members and provide the collected consumer feedback (survey data) to our clients. Our audience engagement platform fosters impactful connections between consumers and brands worldwide, sparking pivotal decision-making processes to drive innovation to new heights.

Our Platform

Market Observer is a DIY (self-service) questionnaire tool that can manage everything from the creation and distribution of questionnaires to their aggregation and analysis, all within a single interface.

Being able to conduct a series of processes on the same interface allows for surveys to be administered efficiently. Further, data is managed in batches on the cloud, which enables smoother and faster sharing of information between organizations.

Intuitive survey creation

Sophisticated retrieval estimates

Diverse aggregation functions

Our Services

| Sampling Solutions

APAC Consumer Panel

Our multi-country research panel network allows you to reach over 65 million consumers across 14 Asia-Pacific markets. Panelists of all sorts of demographics and attributes are available at your fingertips.

Japan - B2B Panel

We specialize in B2B research in Japan, providing expert guidance on sampling for precise, effective studies. Our panel of 1.26 million+ professionals across 50+ profiles delivers reliable insights for accurate research outcomes.

AI Interview Panel

Gain access to a reliable panel for AI-moderated interviews in Japan. Respondents have agreed to participate and are experienced, motivated, and committed to providing quality answers.

Japan - Healthcare Panel

We provide access to a wide range of respondents in Japan, from patients with specific conditions to healthcare professionals. Our panel supports surveys and interviews with patients, professionals, and KOLs.

| API Integrated Solutions

Automated Sampling

Fully automated, agile data collection lets you access our growing online research panel via API integration. Gather insights anytime, anywhere with complete automation.

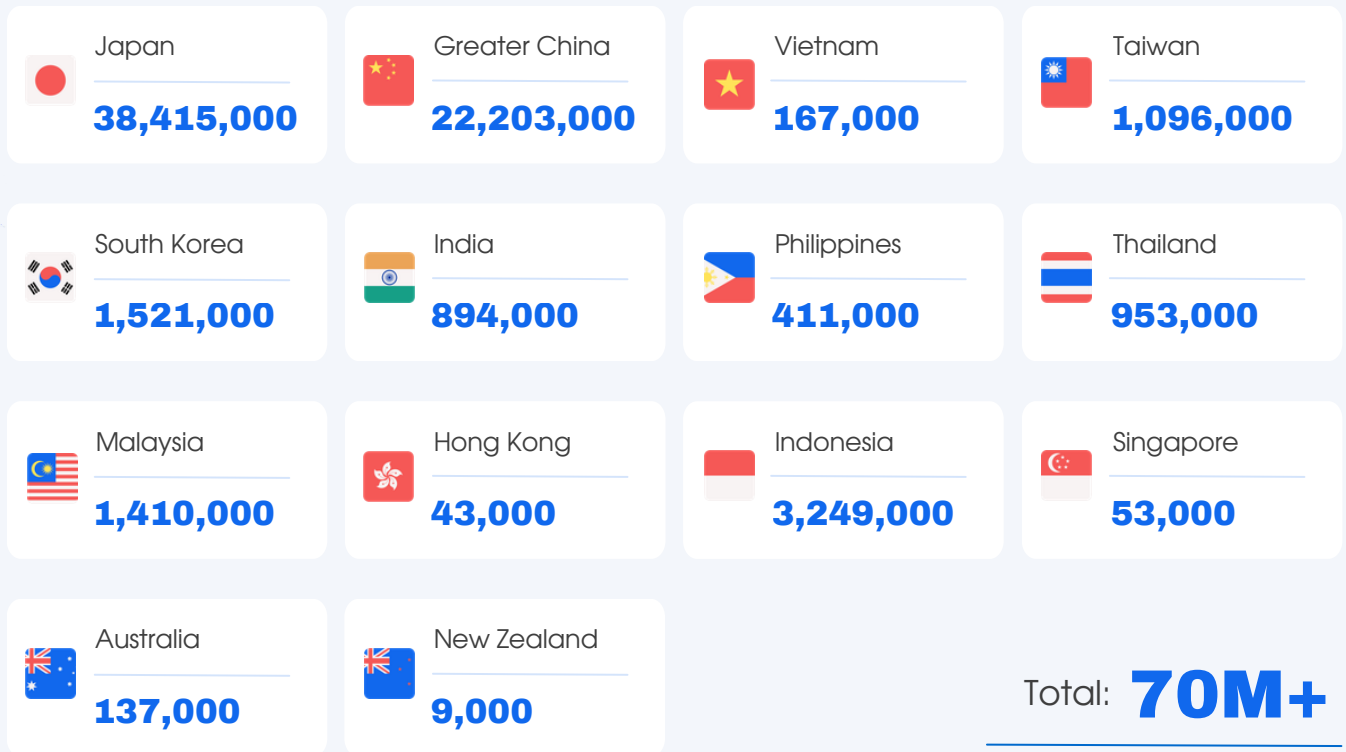

Audience Monetization

Partnering with us via API allows you to deliver survey content to your members, reward them with incentives, and turn engagement into new revenue opportunities.

APAC Consumer Panel

We operate one of the industry's largest online research panel networks, covering 14 countries across the Asia-Pacific region and connecting you with more than 65 million real consumers.

How is Our Research Panel Formed?

Our online research panel consists of two distinctive networks:

1. Proprietary Members

We have built our own membership network through our in-house rewards program/app in Asian regions which is constantly expanding.

2. Alliance and Partnerships

We have formed partnerships with approximately 300 business companies across Asia, which operate membership loyalty programs, through API integration.

With this extensive network, GMO Research & AI has real-time access to members globally which enables higher efficacy and efficiency when delivering online surveys and data collection. By leveraging this expansive infrastructure, GMO Research & AI stands at the forefront of data-driven solutions.

Attribute Information

We deliver specific or hard-to-reach attributes to meet our clients' requirements.

- Type of Social Media
- Personal Interests and Concerns
- Brand of Supermarket Used

...etc.

Quality Management

We uphold stringent quality standards through technology-driven quality control mechanisms and meticulous data verification procedures, led by our team of professional research system specialists.

1. Member Registration

Our own panels require e-mail address, SMS and phone number verification during membership registration.

2. Information Update

We update members' attribute information annually to ensure up-to-date and accurate survey results.

3. No Duplication

We guarantee distinct respondents by leveraging cookies and respondents' unique e-mail addresses.

4. Inactive Measures

We engage only active panelists in our surveys for optimal results.

5. Anti-Fraud Measures

Our system checks our survey response data and detects fraud to maintain the quality of respondents.

6. Educational Surveys

We conduct training surveys regularly with panelists to encourage them to respond appropriately.

7. Ghost Completions Elimination

Our proprietary technology automatically detects and eliminates fraud and bots.

We adhere to the P-Mark, a distinguished Japanese certification for safeguarding personal information, as well as the ISMS (ISO/IEC 27001:2013), an internationally recognized standard for data security. Additionally, we have deployed a designated team of data protection officers dedicated to ensuring our compliance with GDPR, CCPA, and other region-specific laws and regulations.
